

## Donkey Anti-Human IgG H&L antibody

SL0297D

<b>Product Name</b>	Donkey Anti-Human IgG H&L
<b>Chinese Name</b>	驴抗人 IgG H&L
<b>Alias</b>	Human Immunoglobulin G; hu IgG;
<b>Immunogen Species</b>	Donkey
<b>Clonality</b>	Polyclonal
<b>React Species</b>	Human, WB=1:1000-5000,IHC-P=1:100-500,IHC-F=1:200-1000,ELISA=1:2000-10000
<b>Applications</b>	not yet tested in other applications. optimal dilutions/concentrations should be determined by the end user.
<b>Form</b>	Lyophilized powder
<b>immunogen</b>	Native Human IgG
<b>Lsotype</b>	IgG
<b>Purification</b>	Affinity purified by Protein G
<b>Storage</b>	Store at -20°C stable for 2 years (lyophilized powder). Avoid repeated freeze/thaw cycles.
<b>Attention</b>	This product as supplied is intended for research use only, not for use in human, therapeutic or diagnostic applications.
<b>Product Detail</b>	Immunoglobulin G (IgG), is one of the most abundant proteins in serum with normal levels between 8-17 mg/mL in adult blood. IgG is important for our defence against microorganisms and the molecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two separate functions; to bind to the pathogen that elicited the response and to recruit other cells and molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 10 <sup>11</sup> variants.
