

Rabbit Anti-Monkey IgG H&L / Biotin antibody

SL0335R-Bio

Product Name	Rabbit Anti-Monkey IgG H&L / Biotin
Chinese Name	生物素标记的兔抗猴 IgG H&L
Alias	Rabbit Anti-Monkey IgG H&L (Biotin)
Immunogen Species	Rabbit
Clonality	Polyclonal
React Species	Monkey, WB=1:1000-10000,IHC-P=1:100-500,IHC-F=1:100-1000,IF=1:100-1000,ELISA=1:1000-10000
Applications	not yet tested in other applications. optimal dilutions/concentrations should be determined by the end user.
Form	Liquid
Concentration	2.0 mg/ml
immunogen	Native Monkey IgG
Lsotype	IgG
Purification	affinity purified by Protein A
Buffer Solution	10 mM TBS (pH=7.4) with 1% BSA, 3% Proclin300 and 50% glycerol.
Storage	Store at -20°C for one year. Avoid repeated freeze/thaw cycles.
Attention	This product as supplied is intended for research use only, not for use in human, therapeutic or diagnostic purposes. Immunoglobulin G (IgG), is one of the most abundant proteins in serum with normal levels between 1-2 g/L. It is important for our defence against microorganisms and the molecules are produced by B lymphocytes in response to an antigen. The IgG molecule has two separate functions; to bind to the pathogen that elicited the response and to signal other molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination of the immunoglobulin genes. The variability of the IgG pool is generated by somatic recombination of the immunoglobulin genes. The variability of the IgG pool is generated by somatic recombination of the immunoglobulin genes. The variability of the IgG pool is generated by somatic recombination of the immunoglobulin genes. The variability of the IgG pool is generated by somatic recombination of the immunoglobulin genes.
Product Detail	individual at a given time point is estimated to be 1011 variants.
