

## Rabbit Anti-GNRH/LHRH antibody

SL10369R

**Product Name** GNRH/LHRH**Chinese Name** 黄体激素释放激素类似物/促性腺激素释放激素抗体**Alias** GNRH; Gonadoliberin-1; Progonadoliberin-1; GON1\_HUMAN; Progonadoliberin I; Gonadoliberin I; Gonadorelin; Gonadotropin-releasing hormone I; Luliberin I; Luteinizing hormone-releasing hormone I; LH-RH I; progonadoliberin-1 isoform 2 preproprotein; progonadoliberin-1 isoform 1 precursor; GNRH1; GRH; LHRH.**Research Area** Tumour Neurobiology Growth factors and hormones Endocrinopathy**Immunogen Species** Rabbit**Clonality** Polyclonal**React Species** Rat, (predicted: Human, Mouse, Dog, Pig, Cow, Horse, Rabbit, Sheep, )  
IHC-P=1:100-500,IHC-F=1:100-500,IF=1:100-500 (Paraffin sections need antigen**Applications** repair)  
not yet tested in other applications.  
optimal dilutions/concentrations should be determined by the end user.**Theoretical molecular weight** 1/8kDa**Cellular localization** Secretory protein**Form** Liquid**Concentration** 1mg/ml**immunogen** KLH conjugated synthetic peptide derived from human LHRH/Gonadoliberin-1: 24-33/92**Lsotype** IgG**Purification** affinity purified by Protein A**Buffer Solution** 1M TBS(pH7.4) with 1% BSA, 3% Proclin300 and 50% Glycerol.**Storage** Shipped at 4°C. Store at -20 °C for one year. Avoid repeated freeze/thaw cycles.**Attention** This product as supplied is intended for research use only, not for use in human, therapeutic or diagnostic applications.

The protein encoded by this gene is secreted and then cleaved to form the 10 aa luteinizing hormone-releasing hormone (LHRH, also known as gonadoliberein-1), and prolactin release-inhibiting factor (also known as GnRH-associated peptide 1). LHRH stimulates the release of luteinizing and follicle stimulating hormones, which are important for reproduction. Mutation in this gene are associated with hypogonadotropic hypogonadism. Alternatively spliced transcript variants have been described for this gene. [provided by RefSeq, Jul 2012].

**Function:**

Stimulates the secretion of gonadotropins; it stimulates the secretion of both luteinizing and follicle-stimulating hormones.

**Subcellular Location:**

Secreted.

**DISEASE:**

Hypogonadotropic hypogonadism 12 with or without anosmia (HH12) [MIM:614841]: A disorder characterized by absent or incomplete sexual maturation by the age of 18 years, in conjunction with low levels of circulating gonadotropins and testosterone and no other abnormalities of the hypothalamic-pituitary axis. In some cases, it is associated with non-reproductive phenotypes, such as anosmia, cleft palate, and sensorineural hearing loss. Anosmia or hyposmia is related to the absence or hypoplasia of the olfactory bulbs and tracts. Hypogonadism is due to deficiency in gonadotropin-releasing hormone and probably results from a failure of embryonic migration of gonadotropin-releasing hormone-synthesizing neurons. In the presence of anosmia, idiopathic hypogonadotropic hypogonadism is referred to as Kallmann syndrome, whereas in the presence of a normal sense of smell, it has been termed normosmic idiopathic hypogonadotropic hypogonadism (nIHH). Note=The disease is caused by mutations affecting the gene represented in this entry.

**Product Detail**

**Similarity:**

Belongs to the GnRH family.

**SWISS:**

P01148

**Gene ID:**

2796
