Background:	Calcium-dependent membrane-binding proteins may regulate molecular events at the interface of the cell membrane and cytoplasm. This gene is one of several genes that encodes a calcium-dependent protein containing two N-terminal type II C2 domains and an integrin A domain-like sequence in the C-terminus. [provided by RefSeq, Jul 2008] **Function:** May function in membrane trafficking. Exhibits calcium-dependent phospholipid binding properties. **Similarity:** Belongs to the copine family. Contains 2 C2 domains. Contains 1 VWFA domain.
