Reactivity:	(predicted:Human)
Background:	background: This gene encodes a member of the zinc finger domain-containing protein family. This family member contains both a RING-type and a C2H2-type of zinc finger domain, and it may function as an E3 ubiquitin-protein ligase. Protein localization suggests a role in human sperm production and quality control. [provided by RefSeq, Aug 2011] **Function:** ZNF645 contains 1 RING-type zinc finger, which is probably involved in mediating protein-protein interactions. **Subcellular Location:** Nuclear. **Database links:** **Entrez Gene:** 158506 Human **SwissProt:** Q8N7E2 Human
