Background:	background: TP53TG5 may play a significant role in p53/TP53-mediating signaling pathway. It is highly expressed in heart, brain and small intestin. Less abundant in skeletal muscle, spleen, prostate, ovary and colon. A smaller transcript is expressed specifically in the testis. **Function:** May play a significant role in p53/TP53-mediating signaling pathway. **Subunit:** Interacts with p53/TP53. **Subcellular Location:** Cytoplasm. Nucleus. Note=Cell cycle dependent intracellular localization. **Tissue Specificity:** Highly expressed in heart, brain and small intestine. Less abundant in skeletal muscle, spleen, prostate, ovary and colon. A smaller transcript is expressed specifically in the testis. **Database links:** UniProtKB/Swiss-Prot: Q9Y2B4.1 Important
