Background:	background: This gene is located within a region of a segmental duplication on chromosome 16p. The product of this gene belongs to the eukaryotic subfamily of the BolA-like proteins. This gene encodes the BolA-like protein 2. The BolA-like proteins are widely conserved from prokaryotes to eukaryotes, and these proteins seem to be involved in cell proliferation or cell-cycle regulation. This duplicated region contains a complete copy of the short splice variant of the BOLA2 gene and a partial copy of the long splice variant of the BOLA2 gene. **Similarity:** Belongs to the bolA/yrbA family. **Database links:** UniProtKB/Swiss-Prot: Q9H3K6.1 Important **Note:** This product as supplied is intended for research use only, not for use in
